## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

## LISTING OF CLAIMS:

1. (currently amended): A mobile communication terminal equipped with an Internet browser function, comprising:

means for fetching melody data from a web-based server apparatus by using said browser function; and

tone setting means for setting ringing tones with based on tone information contained in said melody data.

- 2. (original): The mobile communication terminal according to claim 1, wherein if said melody data contains no tone information, said tone setting means sets a ringing tone based on preset tone information.
- 3. (original): The mobile communication terminal according to claim 1, wherein if said melody data contains tone information, said tone setting means judges the validity of said tone information.
- 4. (original): The mobile communication terminal according to claim 3, wherein said tone setting means sets ringing tones by performing a modulation processing based on said tone information contained in said melody data.

USSN: 09/759,220

- 5. (original): The mobile communication terminal according to claim 4, wherein said tone information contained in said melody data constitutes tone parameters used for said modulation processing.
- 6. (original): The mobile communication terminal according to claim 2, further comprising:

ringing-speed setting means for setting a tempo at which a melody is played in accordance with said melody data.

7. (original): The mobile communication terminal according to claim 5, further comprising:

ringing-speed setting means for setting a tempo at which a melody is played in accordance with said melody data.

8. (previously presented): A ringing method for a mobile communication terminal equipped with an Internet browser function, comprising:

having access to a web-based server equipment by means of said browser function; notifying said server equipment of desired melody data in conformity with said access; receiving said desired melody data from said server equipment; storing said received desired melody data;

judging whether said stored melody data contains tone information;

USSN: 09/759,220

fetching said tone information if it is judged that said melody data contains the tone information:

setting a tone for playing a melody in accordance with said melody data, based on with said fetched tone information; and

playing said melody in said set tone.

- 9. (previously presented): The ringing method for a mobile communication terminal according to claim 8, wherein if said melody data contains no tone information, a ringing tone is set based on preset tone information.
- 10. (previously presented): The ringing method for a mobile communication terminal according to claim 8, wherein if said melody data contains tone information, the validity of said tone information is judged.
- 11. (previously presented): The ringing method for a mobile communication terminal according to claim 10, wherein said ringing tones are set by performing a modulation processing based on said tone information contained in said melody data.
- 12. (original): The ringing method for a mobile communication terminal according to claim 11, wherein said tone information contained in said melody data constitutes tone parameters used for said modulation processing.

AMENDMENT UNDER 37 C.F.R. § 1.114

Q62674 USSN: -09/759,220

The ringing method for a mobile communication 13. (previously presented): terminal according to claim 9, further comprising setting a tempo at which a melody is played in accordance with said melody data.

The ringing method for a mobile communication 14. (previously presented): terminal according to claim 12, further comprising setting a tempo at which a melody is played in accordance with said melody data.
